

# Computer Science Pathways

computer science can be  
interesting, scary, cool, and confusing.  
so let's navigate it together.

## Computer Science Pathways: Tuesday May 19th at 11 AM on Zoom

a presentation + panel with UCLA students  
about their experiences in computer science.

things we'll talk about:

- how to get started in computer science!
- topics in computer science (AI, data science, machine learning, web & app development)
- what jobs involve computer science?
- what is computer science like in college?
- and more!

## speakers

### nhi (she/her)

is a second-year computer science major. She has experience with C++, C, and Java and greatly enjoys the website projects she's working on now. Outside of web development, she hopes to explore more about computer vision and other areas that catch her eye. In her free time, she reads and writes the occasional stories (currently, her favorites are about time travel!)

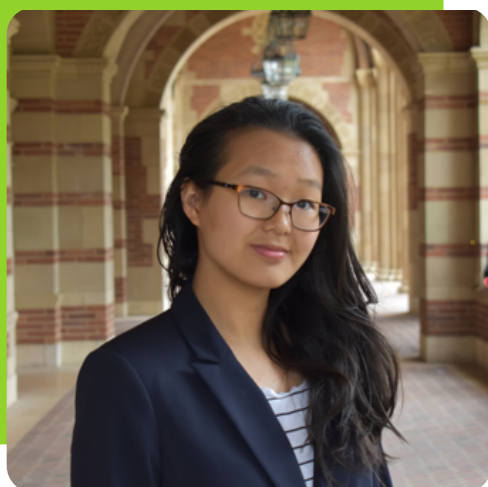

### arjun (he/they)

is a second year Computer Science major, passionate about self-supervised and meta-learning artificial intelligence research in the graph domain, devoted to increasing representation in artificial intelligence research through youth outreach, and an activist for LGBTQIA representation and inclusion. Loves hiking, running, baking, and can whistle really well!

### chloe (she/her)

is a second-year Math of Computation major. She has experience with C++, Python, and R, and is interested in the ways data science can be used for social good. Outside of that, she hopes to learn more about web development and enjoys experimenting with UX design. In her free time, she likes to hike, cook, and learn new languages!

### regina (she/her)

is a second year Computer Science major. She has professional experience with full stack web development, machine learning, and game development. She first got into computer science after making a very simple game with her friends and seeing how fun and fulfilling computer science could be! To procrastinate, she likes trying different things such as trying to start a fire from scratch (which is actually quite difficult!) and baking different foods.

### matt (he/him)

is a second-year Computer Science and Math-Economics double-major. He has previous experience with making websites, apps, hacking into things, and writing code for electronics. He's really passionate about using computers to empower people, especially with education. In his free time, he loves to read - he's recently got into Murakami books!

### keertana (she/her)

is a second year Cognitive Science major and Digital Humanities minor. She has previous experience with C++, Python, and designing user interfaces for websites and mobile apps on Figma and Adobe XD. She is interested in learning more about Human-Computer Interaction and User Experience Design in the future! In her free time, she likes to take lots of naps, cross-stitch, do some yoga and rewatch her favorite TV shows!
